Trouble Logging into your iPad at Home?

By entering your CPS network login, you will be connecting to the CPS network

**To Connect:**

Enter your username, ex. 22rbs01, (not your full email address) and password (the same password you use for computers)

**If you experience authentication issues and receive the error window above, try this:**

1. Turn the Wi-Fi off in settings on your iPad.
2. Turn your iPad off and back on.
3. Turn the Wi-Fi back on and try reconnecting to your home network.

**If you continue to receive the “Authentication” message:**

Try going to another location, like a friend’s house, McDonalds, any place with free Wi-Fi and try to connect to the WIFI. This helps determine if the issue is occurring everywhere or just at one location.

**Note:**

If you are still receiving the proxy prompt and are unable to connect, please go see your Media Specialist.

**Important Information:**

- If your iPad has not been wiped and re-setup since over the summer or last school year, you will probably need to wipe it and re-setup for this school year.

- If your password is really complicated, you may need to change it to a simpler password. The screen above will “time out” before some passwords can be typed in. One idea is to make a password you can enter without having to switch keyboard screens on your iPad. We recommend working with your Media Specialist to make a secure, but not too complicated password.

- Make sure that the pop-up message you’re seeing is the one above. Sometimes, a similar pop-up is asking for a different username and password (like your iTunes account), and that may require a different username and password.
