

FIZZY FUN

Safety Tip

Be careful not to splash the fizz in your eyes!

How do we do it?

What Do We Need?

- ✓ Cake pan
- ✓ Baking Soda
- ✓ Vinegar
- ✓ Food coloring
- ✓ Baster or eye dropper

1. Pour baking soda into a cake pan.
2. Pour vinegar into 3 small cups and add primary food coloring (red, yellow and blue make for interesting fizzy mixtures) one color per cup.
3. Drop colored vinegar with the baster or eye dropper into the baking soda and watch the fizzy fun!

What's in it for us?

- ❖ Children learn with their senses. Your child will explore with the sense of smell and observation skills.
- ❖ Children learn about cause and effect. They will see that when the colors are mixed they make a new color.
- ❖ Your child gains an understanding of science concepts by observing, exploring, and problem solving with the mixture.
